Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Maya has 45 stickers. She gets 18 more, then gives 12 away. How many now? Student's answer: 75

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not subtract the 12 stickers Maya gave away. The total is 45 + 18 - 12.	**51 stickers**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Ben has 30 cards. He buys 25 more and then loses 9. How many now? Student's answer: 16

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student mixed up the steps. Ben buys 25 more first, so 30 + 25 = 55, then 55 - 9 = 46.	**46 cards**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A store has 52 apples. 17 are sold, then 9 more are delivered. How many now? Student's answer: 26

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not add the 9 delivered apples. 52 - 17 = 35, then 35 + 9 = 44.	**44 apples**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

a reads 38 pages Monday and 27 Tuesday. Her book has 100 pages. How many are left? Student's answer: 1

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 100 to the pages read. The pages left are 100 minus the pages read.	**35 pages (100 - 65)**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A class has 24 boys and 19 girls. 10 students leave. How many are left? Student's answer: 43

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student forgot to take away the 10 students who left. 24 + 19 = 43, then 43 - 10 = 33.	**33 students**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Liam has 60 shells. He gives 15 to Ava and finds 8 more. How many now? Student's answer: 67

Solve the two-step problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the 15 shells Liam gave away. The total is 60 - 15 + 8.	**53 shells**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

8 + 7 = ? Student's answer: 14

Add from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student gave a sum that is one too small. 8 + 7 is 15.	**15**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

13 - 6 = ? Student's answer: 8

Subtract from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted one too few. 13 - 6 is 7.	**7**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

9 + 9 = ? Student's answer: 16

Add from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. Doubling 9 gives 18.	**18**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

15 - 8 = ? Student's answer: 6

Subtract from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted one too many. 15 - 8 is 7.	**7**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

6 + 7 = ? Student's answer: 12

Add from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student gave a sum that is one too small. 6 + 7 is 13.	**13**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

17 - 9 = ? Student's answer: 9

Subtract from memory.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted the wrong amount. 17 - 9 is 8.	**8**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Is 7 odd or even? Student's answer: even

Odd or even?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student said even. Seven cannot be split into two equal groups, so it is odd.	**odd**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Is 12 odd or even? Student's answer: odd

Odd or even?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student said odd. Twelve can be split into two equal groups of 6, so it is even.	**even**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 8 as the sum of two equal addends. Student's answer: 3 + 5

Write two equal addends.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The addends are not equal. 3 and 5 are different.	**4 + 4**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Is 15 odd or even? Student's answer: even

Odd or even?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student said even. Odd numbers end in 1, 3, 5, 7, or 9, so 15 is odd.	**odd**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A group of 6 counters is split into pairs with none left over. Student's answer: odd

Odd or even?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student said odd, but there were no counters left over. Six is even.	**even**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 10 as the sum of two equal addends. Student's answer: 5 + 4

Write two equal addends.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The addends are not equal. 5 and 4 are different.	**5 + 5**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 3 rows of 4 dots. Student's equation: 3 + 4 = 7

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?

The student added the rows and columns. Repeated addition adds 4 three times.

Solve the problem correctly. Show all of your work.

4 + 4 + 4 = 12

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 5 rows of 2 dots. Student's equation: 5 + 2 = 7

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?

The student added the rows and columns. Repeated addition adds 2 five times.

Solve the problem correctly. Show all of your work.

2 + 2 + 2 + 2 + 2 = 10

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 2 rows of 6 dots. Student's equation: 6 + 6 + 6 = 18

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added three 6s, but there are only 2 rows.	**6 + 6 = 12**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 4 rows of 3 dots. Student's equation: 4 + 3 = 7

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the numbers instead of repeating 3 four times.	**3 + 3 + 3 + 3 = 12**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 3 rows of 5 dots. Student's equation: 5 + 5 + 3 = 13

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?

The student used 5 twice and 3 once.
Each of the three rows has 5 dots.

Solve the problem correctly. Show all of your work.

5 + 5 + 5 = 15

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An array has 6 rows of 2 dots. Student's equation: 2 + 2 + 2 + 2 + 2 = 10

Write a repeated addition equation.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student left out one row. There are 6 rows, so 2 must be added 6 times.	**2 + 2 + 2 + 2 + 2 + 2 = 12**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

How many hundreds, tens, and ones are in 364? Student's answer: 3 hundreds, 4 tens, 6 ones

Name the place values.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student mixed up the tens and ones. In 364 the tens digit is 6 and the ones digit is 4.	**3 hundreds, 6 tens, 4 ones**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

How many hundreds are in 500? Student's answer: 5 tens

Name the place value.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student named the wrong place. The 5 is in the hundreds place.	**5 hundreds**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 7 hundreds, 0 tens, and 2 ones as a number. Student's answer: 72

Write the number.

What did the student do wrong? Why do you think the student made this error?

The student left out a place. The hundreds digit is 7, the tens digit is 0, and the ones digit is 2.

Solve the problem correctly. Show all of your work.

702

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

How many tens are in 230? Student's answer: 3

Count the tens.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the digit, not the total tens. 230 has 23 tens.	**23 tens**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 9 hundreds, 9 tens, and 9 ones as a number. Student's answer: 99

Write the number.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student left out the hundreds. Nine hundreds means the number has 3 digits.	**999**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

How many ones are in 146? Student's answer: 1

Count the ones.

What did the student do wrong? Why do you think the student made this error?

The student read the hundreds digit. The ones digit in 146 is 6.

Solve the problem correctly. Show all of your work.

6 ones

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 5s from 35. Student's work: 35, 40, 45, 55

Fix the count.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student skipped 50. Counting by 5s adds 5 each time.	**35, 40, 45, 50, 55**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 10s from 240. Student's work: 240, 250, 260, 280

Fix the count.

What did the student do wrong? Why do you think the student made this error?

The student skipped 270. Counting by 10s adds 10 each time.

Solve the problem correctly. Show all of your work.

240, 250, 260, 270, 280

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 100s from 450. Student's work: 450, 550, 560, 660

Fix the count.

What did the student do wrong? Why do you think the student made this error?

The student counted by 10s after 550. Counting by 100s adds 100 each time.

Solve the problem correctly. Show all of your work.

450, 550, 650, 750

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 5s from 60. Student's work: 60, 65, 70, 74

Fix the count.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student wrote 74 instead of 75. Counting by 5s ends in 0 or 5.	**60, 65, 70, 75**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 10s from 905. Student's work: 905, 915, 916, 917

Fix the count.

What did the student do wrong? Why do you think the student made this error?

The student counted by 1s. Counting by 10s changes the tens digit only.

Solve the problem correctly. Show all of your work.

905, 915, 925, 935

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Count by 100s from 120. Student's work: 120, 220, 230

Fix the count.

What did the student do wrong? Why do you think the student made this error?

The student changed the tens digit instead of the hundreds. Counting by 100s gives 320 next.

Solve the problem correctly. Show all of your work.

120, 220, 320

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 342 in expanded form. Student's answer: 300 + 4 + 2

Write in expanded form.

What did the student do wrong? Why do you think the student made this error?

The student wrote 4 instead of 40. The 4 is in the tens place.

Solve the problem correctly. Show all of your work.

300 + 40 + 2

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 'five hundred six' as a numeral. Student's answer: 560

Write the numeral.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student put the 6 in the wrong place. Five hundred six is 506.	**506**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 805 in words. Student's answer: eighty-five

Write in words.

What did the student do wrong? Why do you think the student made this error?

The student left out the hundreds. 805 has 8 hundreds.

Solve the problem correctly. Show all of your work.

eight hundred five

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 'three hundred fifty' as a numeral. Student's answer: 3050

Write the numeral.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added an extra zero. Three hundred fifty is 350.	**350**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 470 in expanded form. Student's answer: 400 + 7

Write in expanded form.

What did the student do wrong? Why do you think the student made this error?

The student left out the tens. 470 has 70 in the tens place.

Solve the problem correctly. Show all of your work.

400 + 70

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 1,000 in words. Student's answer: one hundred

Write in words.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student named the wrong value. 1,000 is one thousand.	**one thousand**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 452 and 425. Student writes: 452 < 425

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?

The student used the wrong symbol. 452 is greater than 425.

Solve the problem correctly. Show all of your work.

452 > 425

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 307 and 370. Student writes: 307 > 370

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?

The student used the wrong symbol. 307 has fewer tens than 370, so it is less.

Solve the problem correctly. Show all of your work.

307 < 370

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 580 and 580. Student writes: 580 > 580

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used the greater-than symbol for equal numbers.	**580 = 580**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 614 and 599. Student writes: 614 < 599

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?

The student used the wrong symbol. 614 has more hundreds than... both have 5 or 6 hundreds, but 614 has 6 hundreds and 599 has 5 hundreds.

Solve the problem correctly. Show all of your work.

614 > 599

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 209 and 290. Student writes: 209 > 290. Student says 9 is bigger than 0.

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?

The student compared the ones digits first. Compare the hundreds first, then the tens. 209 has 2 tens, and 290 has 9 tens.

Solve the problem correctly. Show all of your work.

209 < 290

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Compare 745 and 754. Student writes: 745 > 754

Use >, <, or =

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used the wrong symbol. Both have 7 hundreds and 4 tens after that, but 745 has 4 tens and 754 has 5 tens.	**745 < 754**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

37 + 45 = ? Student's answer: 72

Add within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 37 + 45 is 82.	**82**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

64 - 28 = ? Student's answer: 44

Subtract within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted the tens wrong. 64 - 28 is 36.	**36**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

58 + 27 = ? Student's answer: 75

Add within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 58 + 27 is 85.	**85**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

90 - 36 = ? Student's answer: 56

Subtract within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. 90 - 36 is 54.	**54**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

25 + 49 = ? Student's answer: 64

Add within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not carry the ten. 25 + 49 is 74.	**74**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

81 - 47 = ? Student's answer: 36

Subtract within 100.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. 81 - 47 is 34.	**34**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

23 + 14 + 31 + 12 = ? Student's answer: 70

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 23 + 14 + 31 + 12 is 80.	**80**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

45 + 22 + 10 + 13 = ? Student's answer: 80

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. The total is 90.	**90**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

18 + 18 + 18 + 18 = ? Student's answer: 64

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. Four 18s make 72.	**72**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

35 + 40 + 20 + 5 = ? Student's answer: 90

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 35 + 40 + 20 + 5 is 100.	**100**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

12 + 15 + 13 + 20 = ? Student's answer: 50

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. The total is 60.	**60**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

27 + 9 + 30 + 4 = ? Student's answer: 60

Add the four numbers.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. The total is 70.	**70**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

325 + 240 = ? Student's answer: 515

Add within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 325 + 240 is 565.	**565**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

489 - 120 = ? Student's answer: 379

Subtract within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. 489 - 120 is 369.	**369**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

256 + 388 = ? Student's answer: 544

Add within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 256 + 388 is 644.	**644**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

700 - 250 = ? Student's answer: 550

Subtract within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. 700 - 250 is 450.	**450**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

134 + 275 = ? Student's answer: 399

Add within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not carry correctly. 134 + 275 is 409.	**409**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

600 - 280 = ? Student's answer: 420

Subtract within 1,000.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. 600 - 280 is 320.	**320**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 100 more than 462? Student's answer: 472

Add 100 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 10 instead of 100. The hundreds digit changes.	**562**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 10 less than 305? Student's answer: 395

Subtract 10 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 90 instead of subtracting 10.	**295**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 100 less than 710? Student's answer: 700

Subtract 100 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted 10 instead of 100. 710 minus 100 is 610.	**610**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 10 more than 698? Student's answer: 798

Add 10 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 100 instead of 10. 698 plus 10 is 708.	**708**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 100 more than 850? Student's answer: 860

Add 100 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 10 instead of 100. 850 plus 100 is 950.	**950**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is 10 less than 500? Student's answer: 400

Subtract 10 mentally.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted 100 instead of 10. 500 minus 10 is 490.	**490**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student solves 36 + 27: 30 + 20 = 50, and 6 + 7 = 12, so the total is 62. Is this right?

Check the strategy.

What did the student do wrong? Why do you think the student made this error?

The student added 6 + 7 wrong. 6 + 7 is 13, so the total is 63.

Solve the problem correctly. Show all of your work.

No. The total is 63.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student solves 45 + 38: 40 + 30 = 70 and 5 + 8 = 12, so the total is 82. Is this right?

Check the strategy.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added 5 + 8 wrong. 5 + 8 is 13, so the total is 83.	**No. The total is 83.**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says 40 - 15 is the same as 15 - 40 because subtraction works in any order. Is this right?

Check the reasoning.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
Subtraction does not work in any order. Changing the order changes the answer.	**No. 40 - 15 = 25, but 15 - 40 is not possible with whole numbers.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student changes 98 + 15 to 100 + 15 = 115. Is this right?

Check the strategy.

What did the student do wrong? Why do you think the student made this error?

The student added 2 to 98 but did not take 2 from 15. The correct change is 100 + 13.

Solve the problem correctly. Show all of your work.

No. 98 + 15 = 113.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student solves 72 - 38: 70 - 30 = 40, then 2 - 8 = 6, so the answer is 46. Is this right?

Check the strategy.

What did the student do wrong? Why do you think the student made this error?

The student made a subtraction error when working with 2 - 8. Take 8 from the 40 after subtracting 2 instead. 40 - 6 = 34.

Solve the problem correctly. Show all of your work.

No. The answer is 34.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says 19 + 19 = 20 + 20 = 40, so the answer is 40. Is this right?

Check the strategy.

What did the student do wrong? Why do you think the student made this error?

The student changed both numbers to 20 but did not adjust for the extra 1 added to each. Subtract 2 from 40.

Solve the problem correctly. Show all of your work.

No. The answer is 38.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A pencil starts at the 1 inch mark and ends at the 6 inch mark. Student's answer: 6 inches

How long is the pencil?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not subtract the starting mark. 6 - 1 = 5 inches.	**5 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A book starts at the 0 mark and ends at the 9 cm mark. Student's answer: 8 cm

How long is the book?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the length one short. The book ends at 9, so it is 9 cm long.	**9 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A block starts at the 2 mark and ends at the 7 mark. Student's answer: 7 inches

How long is the block?

What did the student do wrong? Why do you think the student made this error?

The student did not subtract the starting mark. 7 - 2 = 5 inches.

Solve the problem correctly. Show all of your work.

5 inches

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A paper starts at 0 and ends at 10 cm. Student's answer: 9 cm

How long is the paper?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the length one short. The paper ends at 10, so it is 10 cm long.	**10 cm**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rope starts at the 3 inch mark and ends at the 10 inch mark. Student's answer: 10 inches

How long is the rope?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student did not subtract the starting mark. 10 - 3 = 7 inches.	**7 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

An object starts at the 1 mark and ends at the 5 mark. Student's answer: 5 inches

How long is the object?

What did the student do wrong? Why do you think the student made this error?

The student did not subtract the starting mark. 5 - 1 = 4 inches.

Solve the problem correctly. Show all of your work.

4 inches

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A desk is 12 paper clips long and 6 erasers long. Student says: 'Paper clips are longer.'

Which unit is longer?

What did the student do wrong? Why do you think the student made this error?

The student got it backward. Fewer units means each unit is longer, so erasers are the longer unit.

Solve the problem correctly. Show all of your work.

Erasers are the longer unit.

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rope measures 9 small cubes and 3 large cubes. Student says: 'The rope is longer with large cubes.'

Is the rope longer?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The rope is the same length. Only the number of units changes with unit size.	**The rope is the same length. Large cubes are just bigger units.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: 'The number of units is always the same, no matter what unit is used.'

Is this right?

What did the student do wrong? Why do you think the student made this error?

A smaller unit needs more units to measure the same object, so the count changes.

Solve the problem correctly. Show all of your work.

No. Smaller units give a bigger number.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

ook is 10 short sticks and 5 long sticks. Student says: 'The book is 5 units long, because 5 is the smallest num

How long is the book?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student thought the smallest number means the shortest length. The unit is longer when the count is smaller.	**The book is the same length. Short sticks give 10 units, and long sticks give 5 units.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student measures a board with 8 blue blocks, then 4 red blocks. Student says: 'Red blocks are smaller.'

Which block is smaller?

What did the student do wrong? Why do you think the student made this error?

The student reversed the comparison. Fewer red blocks cover the board, so red blocks are larger.

Solve the problem correctly. Show all of your work.

Red blocks are larger.

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: 'Two different units always give the same count.'

Is this right?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
Different units change the count. A smaller unit gives a larger count.	**No. Different units give different counts.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the height of a door in feet. Student's answer: 2 inches

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used the wrong unit and size. A door is about 7 feet tall.	**About 7 feet**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the length of a pencil in centimeters. Student's answer: 150 cm

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student overestimated. A pencil is about 15 cm long.	**About 15 cm**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the height of a classroom door in inches. Student's answer: 3 inches

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student underestimated. A door is about 80 inches tall.	**About 80 inches**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the length of a banana in feet. Student's answer: 6 feet

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used the wrong unit. A banana is about 6 inches long.	**About 6 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the height of a bookshelf in centimeters. Student's answer: 3 cm

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student underestimated. A bookshelf is about 180 cm tall.	**About 180 cm**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Estimate the length of a pencil in meters. Student's answer: 17 meters

Estimate the length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used the wrong unit. A pencil is about 17 cm long.	**About 17 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Ribbon A is 12 inches. Ribbon B is 7 inches. How much longer is A? Student's answer: 19

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths. To find how much longer, subtract: 12 - 7.	**5 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Pencil 1 is 9 cm. Pencil 2 is 4 cm. How much longer is pencil 1? Student's answer: 13

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths instead of subtracting.	**5 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Rope 1 is 25 cm. Rope 2 is 30 cm. How much longer is rope 2? Student's answer: 55

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths instead of subtracting. 30 - 25 = 5.	**5 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Stick A is 6 inches. Stick B is 14 inches. How much longer is B? Student's answer: 20

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths. 14 - 6 = 8.	**8 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Shelf 1 is 40 cm. Shelf 2 is 52 cm. How much longer is shelf 2? Student's answer: 92

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths. 52 - 40 = 12.	**12 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

String 1 is 18 inches. String 2 is 10 inches. How much longer is string 1? Student's answer: 28

Find how much longer.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the lengths. 18 - 10 = 8.	**8 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rope is 45 cm. The second rope is 27 cm longer. How long is the second rope? Student's answer: 18

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted, but the second rope is longer, so we add. 45 + 27 = 72.	**72 cm**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A snake is 58 inches. A piece 13 inches long is cut off. How long is the rest? Student's answer: 71

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added, but a piece was cut off, so we subtract. 58 - 13 = 45.	**45 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A jump is 36 inches. Then another jump is 24 inches more. What is the total? Student's answer: 12

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted, but the jumps are added together. 36 + 24 = 60.	**60 inches**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A board is 80 cm. Ana cuts off 25 cm. How long is the rest? Student's answer: 105

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added, but a piece was cut off, so we subtract. 80 - 25 = 55.	**55 cm**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Mia walks 40 meters and then 35 meters. What is the total? Student's answer: 5

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted, but both walks add up. 40 + 35 = 75.	**75 meters**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A line is 90 cm. A second line is 46 cm shorter. How long is the second line? Student's answer: 136

Solve the length problem.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added, but the second line is shorter, so we subtract. 90 - 46 = 44.	**44 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Plot 16 on a number line from 0 to 20. Student places it at 6.

Place 16 on the number line.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student placed the number at the digit 6. On a number line, 16 is 16 units from 0.	**16**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

On a number line, the student says 7 is at the 6th mark when counting 0 as the first mark.

Where is 7 on the number line?

What did the student do wrong? Why do you think the student made this error?

The student counted the 0 as a mark, but the position of 7 is 7 units from 0.

Solve the problem correctly. Show all of your work.

7 units from 0

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A number line from 40 to 60. The student places 52 halfway between 40 and 60 at 45.

Find the halfway point.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student misplaced the midpoint. Halfway between 40 and 60 is 50.	**50**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says the distance from 12 to 18 on a number line is 5.

Find the distance.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the distance wrong. 18 - 12 = 6.	**6**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says 0 to 30 counting by 10s has 2 jumps.

How many jumps?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student missed one jump. 0 to 10, 10 to 20, and 20 to 30 is 3 jumps.	**3 jumps**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: '35 is 5 more than 40.'

Compare 35 and 40.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student reversed the comparison. 35 is 5 less than 40.	**35 is 5 less than 40.**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A clock shows 4:25. Student's answer: 4:20

Read the time to the nearest 5 minutes.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the minutes wrong. The minute hand is at 25 minutes.	**4:25**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A clock shows 9:40. Student's answer: 9:08

Read the time to the nearest 5 minutes.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the minutes as 8 minutes. The minute hand is at 40 minutes.	**9:40**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A clock shows 6:55. Student's answer: 6:50

Read the time to the nearest 5 minutes.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read 50 minutes. The minute hand is at 55 minutes.	**6:55**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Write 'twenty to 3' as a digital time. Student's answer: 3:20

Write the digital time.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student wrote the wrong hour and minutes. Twenty to 3 is 2:40.	**2:40**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A student eats breakfast at 7:30 in the morning. Student's answer: 7:30 p.m.

Write a.m. or p.m.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used p.m. for a morning time. Morning times use a.m.	**7:30 a.m.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A student goes to bed at 8:30 at night. Student's answer: 8:30 a.m.

Write a.m. or p.m.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student used a.m. for a night time. Night times use p.m.	**8:30 p.m.**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is the value of 3 quarters and 2 dimes? Student's answer: 60 cents

Count the coins.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted 3 quarters as 60 cents. Three quarters is 75 cents, plus 20 cents from the dimes.	**95 cents**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A snack costs 65 cents. A student pays with $1. What is the change? Student's answer: 45 cents

Find the change.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted incorrectly. $1 is 100 cents, and 100 - 65 = 35 cents.	**35 cents**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

What is the value of 4 dimes and 3 nickels? Student's answer: 43 cents

Count the coins.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made an addition error. 4 dimes is 40 cents and 3 nickels is 15 cents, for 55 cents.	**55 cents**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A book costs $12 and a pen costs $3. What is the total? Student's answer: $9

Find the total.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student subtracted, but both prices are added together. $12 + $3 = $15.	**$15**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A student pays $5 for a 75-cent item. What is the change? Student's answer: $2.25

Find the change.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student made a subtraction error. **$5.00 - $0.75 = $4.25.**	**$4.25**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

How many cents are in 2 nickels and 4 pennies? Student's answer: 6

Count the cents.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the coins, not the value. 2 nickels is 10 cents and 4 pennies is 4 cents, for 14 cents.	**14 cents**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A line plot shows 5 X's at 4 inches and 3 X's at 5 inches. How many measured 5 inches? Student's answer: 5

Read the line plot.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the number at 4 inches. There are 3 X's at 5 inches.	**3**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A line plot has 5 + 3 + 2 X's. How many X's are there in all? Student's answer: 12

Count all the X's.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added wrong. 5 + 3 + 2 is 10.	**10**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says the number of X's tells the length, not how many measurements there are.

Is this right?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The X's show how many measurements there are at each length, and the length is shown on the number line.	**No. Each X is one measurement.**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A line plot shows measures of 4, 5, 5, and 3 cm. Which length occurs most? Student's answer: 3 cm

Find the most common length.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student picked a length that appears only once. 5 cm appears twice.	**5 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

On a line plot, each X means 1 child. Student says 4 X's means 2 children.

How many children?

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student misread the key. Each X is 1 child, so 4 X's mean 4 children.	**4 children**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Measures are 7, 7, 8, and 9 cm. Which length is the mode? Student's answer: 9 cm

Find the most common value.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student picked a length that appears only once. 7 cm appears twice.	**7 cm**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

re graph shows 3 pictures of apples. Each picture is 2 students. How many students? Student's answer: 3 st

Read the picture graph.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted pictures, not students. Each picture stands for 2 students.	**6 students**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A bar graph has a scale of 5. The bar reaches 3 marks. Student's answer: 3

Read the bar graph.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student read the marks, not the value. Each mark is worth 5, so 3 marks is 15.	**15**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Dogs has 20 votes and cats has 15 votes. How many more chose dogs? Student's answer: 35

Compare the two bars.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the two numbers. The difference is 20 - 15 = 5.	**5 more**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A picture graph has 4 pictures of cars, and each picture is 5 cars. How many cars? Student's answer: 4 cars

Read the picture graph.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the pictures, not the cars. 4 pictures times 5 is 20.	**20 cars**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A bar for 25 is shorter than a bar for 15. Student says: '25 is less than 15.'

Compare the bars.

What did the student do wrong? Why do you think the student made this error?

The student reversed the comparison. 25 is greater than 15, so that bar is longer.

Solve the problem correctly. Show all of your work.

25 is greater than 15.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A picture graph shows 3 pictures and 2 pictures, each worth 10. Student's answer: 32

Find the total.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student added the picture count, not the values. 5 pictures times 10 is 50.	**50**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Draw a shape with 4 sides and 4 right angles. Student draws a triangle.

Draw the shape.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student drew 3 sides. The shape needs 4 sides and 4 right angles.	**A rectangle or square**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Draw a hexagon. Student draws a shape with 5 sides.

Draw the shape.

What did the student do wrong? Why do you think the student made this error?

The student drew 5 sides. A hexagon has 6 sides.

Solve the problem correctly. Show all of your work.

A shape with 6 sides

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Draw a triangle with one right angle. Student draws a circle.

Draw the shape.

What did the student do wrong? Why do you think the student made this error?

A circle has no sides or angles. The shape must be a triangle.

Solve the problem correctly. Show all of your work.

A triangle with one right angle

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Name a shape with 5 sides. Student's answer: a quadrilateral

Name the shape.

What did the student do wrong? Why do you think the student made this error?

A quadrilateral has 4 sides. A shape with 5 sides is a pentagon.

Solve the problem correctly. Show all of your work.

Pentagon

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Draw a shape with 4 equal sides and no right angles. Student draws a square.

Draw the shape.

What did the student do wrong? Why do you think the student made this error?

A square has right angles. The shape needs 4 equal sides with no right angles, like a rhombus.

Solve the problem correctly. Show all of your work.

A rhombus

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Draw a triangle with 1 right angle. Student draws an equal-sided triangle.

Draw the shape.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
An equal-sided triangle has no right angles. The shape needs one right angle.	**A right triangle**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rectangle is partitioned into 3 rows of 4 squares. Student counts 7 squares.

Count the squares.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the rows and columns, not all the squares. 3 times 4 is 12.	**12 squares**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rectangle has 2 rows of 5 squares. Student counts 7 squares.

Count the squares.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student missed squares. 2 times 5 is 10.	**10 squares**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rectangle has 4 rows and 3 columns of squares. Student counts 4 squares.

Count the squares.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted the rows only. 4 times 3 is 12.	**12 squares**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rectangle has 5 rows of 2 squares. Student counts 5 squares.

Count the squares.

What did the student do wrong? Why do you think the student made this error?

The student counted the rows only. 5 times 2 is 10.

Solve the problem correctly. Show all of your work.

10 squares

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A square has 3 rows and 3 columns of squares. Student counts 6 squares.

Count the squares.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student missed squares. 3 times 3 is 9.	**9 squares**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A 4 by 4 grid of squares. Student counts only the outer squares and says 12.

Count the squares.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
The student counted only the outside squares. The full grid has 4 times 4, or 16 squares.	**16 squares**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A circle is split into 3 equal parts. Student says: 'halves.'

Name the equal parts.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
Halves need 2 equal parts. Three equal parts are thirds.	**thirds**

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A rectangle is split into 4 equal parts. Student says: 'fifths.'

Name the equal parts.

What did the student do wrong? Why do you think the student made this error?

Four equal parts are fourths. Fifths need 5 equal parts.

Solve the problem correctly. Show all of your work.

fourths

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

A shape is split into 2 equal parts. Student says: 'thirds.'

Name the equal parts.

What did the student do wrong? Why do you think the student made this error?	Solve the problem correctly. Show all of your work.
Two equal parts are halves. Thirds need 3 equal parts.	**halves**

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: 'One fourth of a shape is 1 of 3 equal parts.'

Is this right?

What did the student do wrong? Why do you think the student made this error?

One fourth is 1 of 4 equal parts. One of 3 equal parts is one third.

Solve the problem correctly. Show all of your work.

No. One fourth is 1 of 4 equal parts.

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: 'Equal shares must be the same shape.'

Is this right?

What did the student do wrong? Why do you think the student made this error?

Equal shares need to have the same area, not the same shape.

Solve the problem correctly. Show all of your work.

No. Equal shares need the same area, not the same shape.

Original task. Format inspired by error analysis routines.

Find the Error

Name: Answer Key Date: _____

Directions: Analyze the student's work shown below. Identify the error. Then correctly solve the problem.

Student says: 'One third and one third makes one sixth.'

Add the fractions.

What did the student do wrong? Why do you think the student made this error?

The student added wrong. One third and one third make two thirds.

Solve the problem correctly. Show all of your work.

Two thirds
